Notice regarding cyber-attack on our system

We experienced a cyber-attack on our company servers. We deeply apologize for any inconvenience, caused by the incident, to our stakeholders.

We confirmed that our system was cyber-attacked, by a ransomware, in the late evening on Sunday 17th July, 2022.

We shut down and isolated all our networks in order to minimize the total damage, to identify the attacked servers and files and to investigate the origin of the attack while restoring the system. However, as the damage doesn't seem minute, we believe that it may take a while until we complete all the necessary investigation and resume our normal operations.

We reported to the police, software vendors and other institutions and we are currently tackling the situation, under their advice and cooperation.

Updated release will be made upon finding more useful information, e.g., clear map of damaged area, precise origin of the attack, and the timeline for recovery.

We sincerely apologize for any inconvenience caused.
